Custom Solutions. Scalable Offerings. Complete and Expert Service.

ScienceMedia Leads the Way in Delivering eLearning Programs to Ensure Clinical Competency Across Your Organization

ScienceMedia is a leader in developing education programs based in medical science for life science companies worldwide. As the life science industry rapidly evolves, traditional learning approaches need to be reconsidered to meet the need for clinical competence across an organization. The ability to provide compelling training solutions that meet this need, along with innovative delivery options for a mobile workforce will be central to your selection of a training partner.

With over 20 years of experience in developing hundreds of sophisticated, high science learning solutions, ScienceMedia is a “science first” company. Since inception, ScienceMedia has been at the forefront of creating more engaging, self-paced and targeted education regardless of application level. This dedication to developing the appropriate level of educational materials for training results in each effort being done right the first time. Period.

ScienceMedia’s unequaled service involves a deep understanding of an organization’s competitive urgency. Utilizing a rapid, proprietary development process supported by a sophisticated project management system and high touch client service, each customer feels confident their project is the company’s top priority.

ScienceMedia’s approach to learning is unrivaled. Utilizing unique, proven learning theories, proprietary course design methodologies are integrated with rigorous scientific research to provide learning programs that can speed time to clinical competency and sustain ongoing performance.

Our advantages include:

- In-house Doctorate level subject matter experts collaborate with Instructional Designers and a dedicated team of multimedia developers to design and produce authoritative and highly referenced content specific to a company’s needs
- Core expertise in training highly educated learners
- Learning content that is visually engaging, impactful and interactive

Save Time and Money on Custom Program Development

ScienceMedia will utilize its proprietary, robust library of medical and scientific learning objects to rapidly and cost-effectively develop customized off-the-shelf courses that provide a number of advantages:

- Quickly build, host and deploy high-level disease state foundational learning as pre-work for medical professional teams
- Customized sales force training curriculums developed and adapted from existing content and programmed for client LMS delivery
- Efficiently convert existing print-based curriculums utilizing multimedia library assets to create higher learner engagement
